Reports

Choose a period and what goes in, then print. Whatever you leave out is named on the cover of the report itself, so the person you hand it to can see the shape of what they were given.

What kind of report is this for?**Full privacy record****Everything this installation can
evidence, in the order it reads****Board or management pack****What is being processed, what
people decided, what is not**

What kind of report is this for?

Period and title

Sections

**Response to a regulator or
auditor****The record of notices,
decisions, rights handling,
incidents and the audit trail
behind them.****Internal control review****Where the data is, who else
touches it, and what is
recorded as not covered or
unverified.**

A preset is an ordered selection of the same sections. Adjust it below; nothing a preset shows is unavailable to a manual selection.

Period and title

Report title From To

Leave the dates empty for everything on record. A period narrows the sections that are about events; it does not narrow configuration.

The print view supports up to 2,000 rows in each section. If a section is larger, the report is refused as incomplete; choose a shorter period where the section supports dates. A large-data export is not available in this build.

Sections

- ☒ Purposes and published notices
- ☒ Consent decisions
- ☒ Rights requests
- ☒ Personal data inventory
- ☒ Coverage gaps
- ☒ Processors and other fiduciaries
- ☒ Incidents and intimations
- ☒ Audit trail
- ☒ Audit retention
- ☒ Operational readiness

10 of 10 selected. The 0 you have not selected will be named on the cover.

Build this report

• Ready to print

Save as PDF

Opens the print dialog: choose “Save as PDF” as the destination. The builder above is hidden in print; what follows is the report.

Or take the tables as spreadsheets: **Download every section as CSV**

A CSV carries the table and nothing else. The period, the scope, the sections left out and each section’s caveats live in the printed report, so a spreadsheet on its own is not the record — which is why the report digest is in every filename. Formula-like values are prefixed as text; check them again if a spreadsheet edits and re-saves the CSV.

What this report is, and is not

Each section below is a table of what this installation recorded. None of it is an opinion about whether any legal obligation has been met, and there is no field in this report in which such a conclusion could be written.

- Every section is a table of what this installation recorded. None of it is an opinion about whether an obligation has been met, and there is no field in which this report could say that it had.
- Sections left out are named on the cover with why. A report assembled from a subset is still a report about a subset, and the reader is told which one.
- A section withheld for authority was not read. It is not empty, and it is not evidence that there was nothing to show.
- Figures are read when the report is generated. A record created after that moment appears the next time it is run.
- This product renders the report; the operator saves it as PDF from the browser. Nothing here produced or signed a binary file.
- A section above 2,000 rows is refused rather than silently shortened. Narrow the period where the section supports one; larger complete exports need a separate supported path.

Sections not included

Every section this installation can produce is included.

Contents

1. Purposes and published notices
2. Consent decisions
3. Rights requests
4. Personal data inventory
5. Coverage gaps
6. Processors and other fiduciaries
7. Incidents and intimations
8. Audit trail
9. Audit retention
10. Operational readiness

1. Purposes and published notices

Every purpose this installation processes for, the notice version published against it, and the personal data that notice itemises.

Purpose	Status	Notice	Language	Published	Personal data itemised

32 purpose-and-notice pairing(s) recorded in this scope.[Download this section as CSV](#)**What this section does not tell you**

- A published notice is the exact version a person was shown. A notice showing no itemisation was published before this product recorded it, and its items were never captured rather than being empty.
- This lists what was published. It does not assess whether the wording of any notice is adequate.

2. Consent decisions

Every consent decision a data principal made in the period, as recorded at the moment it was accepted.

Accepted	Purpose	Decision	Epoch

54 decision(s) in the period: 28 grant(s) and 26 withdrawal(s). Principals are counted by decision, not by person.

Download this section as CSV

What this section does not tell you

- A decision is recorded once and never edited. A later decision supersedes an earlier one without removing it, so the same person may appear more than once.

- Identifiers of the people who decided are deliberately not printed. This is a record of decisions, not a list of individuals.

3. Rights requests

Requests data principals made under the rights this Act provides, and where each one stands.

Received	Right	State	Last moved
2026-10-03T16:17:32.596Z	ERASURE	RECEIVED	2026-10-03T16:17:32.596Z

2026-10-03T12:31:30.981Z	ERASURE	RECEIVED	2026-10-03T12:31:30.981Z
2026-10-03T12:31:30.969Z	ACCESS	RECEIVED	2026-10-03T12:31:30.969Z

13 request(s) in the period, of which 13 are still open.

[Download this section as CSV](#)

What this section does not tell you

- The rights listed are the ones this Act provides: access, correction, erasure, grievance and nomination. A right from another regime would not appear because this product does not record one.
- A response window is whatever the organisation configured with its stated source. This product ships no statutory deadline of its own.

4. Personal data inventory

Where personal data is held, according to this installation, and whether each record was observed or stated by the organisation.

System	Asset	Kind	Provenance	Review
Aster online store	Customer accounts	DATASET	ASSERTED	UNREVIEWED
Aster online store	Customer number	FIELD	ASSERTED	UNREVIEWED
Aster online store	Email address	FIELD	ASSERTED	UNREVIEWED
Aster online store	Marketing preferences	DATASET	ASSERTED	UNREVIEWED
Aster online store	Nightly backup of customer accounts	BACKUP_COPY	ASSERTED	UNREVIEWED
Aster online store	Order history	DATASET	ASSERTED	UNREVIEWED
Aster online store	Support tickets	DATASET	ASSERTED	UNREVIEWED

7 live asset(s), of which 7 are asserted rather than observed.

[Download this section as CSV](#)

What this section does not tell you

- An asserted asset is what somebody told this product. It is not evidence that the data is there, and it is not something ORVIA observed.
- This is what has been recorded. Personal data in a system nobody has declared does not appear, and its absence here is not evidence that it does not exist.

5. Coverage gaps

What this installation records as not covered, not verified, or outside what it can act on.

Nothing was recorded for this section in this period. This is an absence of records, not a statement that nothing happened.

0 recorded gap(s), of which 0 are not resolved.

[Download this section as CSV](#)

What this section does not tell you

- A gap is recorded when somebody notices it. An empty section means none has been recorded, which is a different fact from full coverage.
- A gap accepted as a risk is a decision somebody took. It is not a gap that was closed.

6. Processors and other fiduciaries

Who else handles personal data on this organisation's behalf, and in what role.

Name	Role	Region	Sub-processors permitted	Recorded
Swift Courier Services (synthetic)	PROCESSOR	India	No	2026-10-03T12:31:07.573Z

1 recorded processor relationship(s).

[Download this section as CSV](#)

What this section does not tell you

- Roles are those this Act recognises. There is no controller here, because this regime does not have one.
- A recorded relationship is a declaration by the organisation. This product does not verify what any processor actually does.

7. Incidents and intimations

Personal data incidents detected in the period, and the intimations owed for each under the rules the organisation configured.

Detected	Severity	Incident state	Recipient	Intimation	Due
2026-10-02T09:15:00.000Z	HIGH	OPEN	—	—	—

1 incident-and-intimation row(s) in the period.

[Download this section as CSV](#)

What this section does not tell you

- Occurred, detected and became-aware are three different moments and each clock runs from the one its rule names. This product ships no deadline of its own.
- An intimation recorded as sent is a record that somebody sent it. This product has no transport and did not observe it arrive.

8. Audit trail

What was recorded in the audit trail during the period, grouped by the operation and the kind of actor that performed it.

Operation	Actor	Events	First	Last

8949 audited event(s) across 239 operation(s) in the period.

[Download this section as CSV](#)

What this section does not tell you

- An audit record is an envelope: who did what, to which resource, under which request, and when. It carries no payload, so nothing about the content of any record appears here.
- The trail is append-only against every role, so a count here cannot have been reduced.

9. Audit retention

How long the audit trail is kept for each stated purpose, and what each period rests on.

Purpose	Period	What the period rests on	Recorded
SECURITY_INVESTIGATION	No period configured	Nothing is assumed in place of a configured period	—
REGULATORY_ACCOUNTABILITY	No period configured	Nothing is assumed in place of a configured period	—
COMMERCIAL_OBLIGATION	No period configured	Nothing is assumed in place of a configured period	—
CHANGE_TRACEABILITY	No period configured	Nothing is assumed in place of a configured period	—

0 of 4 purpose(s) have a configured period.

[Download this section as CSV](#)

What this section does not tell you

- No retention period ships with this product. A purpose with none configured is an omission to fix, not a decision to keep records indefinitely.
- This is a schedule. Nothing deletes an audit record: a period elapsing is reported and never acted on.

Customer-local evaluation build with synthetic records. No production system, real recipient or vendor service is contacted from this interface.

reported as separate facts rather than one status.

Question	Answer
Policies published	30
Systems configured	31
Systems observed able to restrict	0

Three counts read from this installation at the moment the report was generated.

[Download this section as CSV](#)

What this section does not tell you

- These are three separate facts and are deliberately not combined into a single status. A live installation with configured systems can still be unable to carry out a decision.
- A system observed able to restrict was checked at some point. This does not predict that any particular decision will succeed.

- Not a compliance certificate
